【授業の概要・目的】							
<p>Why should we care about the health of other people, especially that of people in other countries? Global health is not just about health in low-income countries; it is about common health problems faced by human population as a whole. As the world has become more globalized, so too has health. Diseases do not respect political boundaries, thus global cooperation is critical for our collective survival. Health is closely linked with economic and social development and has important implications for global security and freedom.</p> <p>This course will address the most critical issues in global health, introducing the socio-cultural, economic, political, and environmental factors that affect health of populations globally.</p>							
【到達目標】							
<p>* To introduce key concepts used in examining global health issues</p> <p>* To gain insight into the current challenges of global health</p> <p>* To gain an understanding of why tackling global health issues has the potential to reduce poverty, build stronger economies and promote peace</p>
