「授業の	[授業の概要・目的]												

All our familiar objects - our cars, clothes, computers, and homes - are made out of materials. This course covers the essential chemistry behind common materials like metals, polymers, and ceramics. The lectures include key concepts in materials chemistry, including chemical bonding, crystal structures, and phase diagrams. You will learn to distinguish the physical properties of conductors, semiconductors, and insulators, and become familiar with the structure and synthesis of polymers and ceramics. The last part of the course provides an overview of modern functional materials such as ferroelectrics, nanomaterials, and composites.

## [到達目標]

This course provides students with an introduction to the chemical and physical properties of materials and their applications in technology.

## [授業計画と内容]

- 1. Classification of matter
- 2. Historical overview
- 3. Bonds
- 4. Metals and conductivity
- 5. Ceramics and glasses
- 6 Polymers
- 7. Dyes, paints, and coatings
- 8. Composites
- 9. Semiconductors
- 10. Superconductors
- 11. Ferroelectrics
- 12. Photonic materials
- 13. Nanomaterials
- 14. Bioinspired materials
- 15. [no class]
- 16. Feedback

## [履修要件]

特になし

Introduction to the Chemistry of Materials-E2(2)
Each lecture will introduce a short homework assignment related to the topic covered. These assignments
count for 70% of the final grade. Attendance and class participation count for 30%.
