【授業の概要・目的】							
<p>This interdisciplinary course is intended to provide both science and non-science majors with a basic understanding of the chemistry (and physics) behind artworks and art materials. Scientific techniques applied to art conservation and restoration will also be introduced.</p> <p>This course will explore the chemistry of colors (pigments and dyes), ceramics, glass, lacquers, and metals. The basic scientific principles and theories behind each topic will also be introduced. Several examples from Eastern and Western art will be discussed in class.</p>							
【到達目標】							
<p>In this course students will familiarize themselves with the materials and scientific methods behind the preparation and restoration of artworks. The students will learn the basic physics and chemical concepts necessary to understand the different topics introduced in class. The students will also be encouraged to reflect on the truly interdisciplinary nature of art conservation, and appreciate the importance of multidisciplinary approaches for problem solving.</p>							
【授業計画と内容】							
<p>The course consists of 12 lessons in class, a museum visit (equivalent to 2 classes), exam, and a feedback class.</p> <p>The content of the course:</p> <ol style="list-style-type: none"> <li>1.
