<b>Keyword</b>	Global Health / Disease burden / Public Health / International Health / Health				
<b>[Overview and purpose of the course]</b>					
<p>Why should we care about the health of other people, especially that of people in other countries? Global health is not just about health in low-income countries; it is about common health problems faced by human population as a whole. As the world has become more globalized, so too has health. Diseases do not respect political boundaries, thus global cooperation is critical for our collective survival. Health is closely linked with economic and social development and has important implications for global security and freedom.</p> <p>This course will introduce students to major global health challenges that affect the health of populations globally.</p>					
<b>[Course objectives]</b>					
<p>* To understand key concepts used in examining global health issues</p> <p>* To gain insight into the current challenges of global health</p> <p>* To gain an understanding of why tackling global health issues has the potential to reduce poverty, build stronger economies and promote peace</p>
