

Course number	U-LAS70 10002 SE50				
Course title (and course title in English)	ILAS Seminar-E2 :Global Environmental Issues (地球環境問題) ILAS Seminar-E2 :Global Environmental Issues		Instructor's name, job title, and department of affiliation	Graduate School of Agriculture Professor, Daniel Epron	
Group	Seminars in Liberal Arts and Sciences		Number of credits	2	Number of weekly time blocks 1
Class style	seminar (Face-to-face course)	Year/semesters	2024 • First semester		Quota (Freshman) 15 (15)
Target year	Mainly 1st year students	Eligible students	For all majors		Days and periods Mon.5
Classroom	04, Yoshida-South Campus Bldg. No. 1			Language of instruction	English
Keyword	Climate change / Land degradation / Pollution / Resource depletion / Biodiversity				
[Overview and purpose of the course]					
Several environmental problems preoccupy peoples around the world. They result from conflicts between natural and human systems, affect our daily life and compromise our future. This seminar will explore how several environmental issues are addressed at the regional, national or international level, and how ecology and environmental science are used as a basis for addressing and tackling these issues.					
[Course objectives]					
Upon successful completion of this seminar, students will (i) have a basic scientific understanding of the major environmental issues, and will be able (ii) to critically assess these issues and (iii) to develop decision-making skills for proposing sustainable options for the future.					
[Course schedule and contents]					
<p>The course will be based on in-depth analyses of several case studies that will be related to either:</p> <ul style="list-style-type: none"> - Climate change: vulnerability, adaptation and mitigation - Heat waves and urban heat islands - Air pollution: ozone in the troposphere - Water pollution: eutrophication of aquatic ecosystems and scarcity of fresh water resources - Nitrogen deposition: vegetation shifts - Land degradation and restoration - Pesticides and endocrine disruptor - Resource depletion: overfishing and fishing allowance - Habitat fragmentation and endangered species <p>The first class will be an introduction and overview of course content. We will review the major environmental issues through reading a scientific paper. Students will work as small teams (optimally five teams) on one of these subjects they will select. Each team will have to read in depth relevant scientific papers, first provided by the instructor and then find by the student that that will present to the group during the next class as a starting point of a discussion. For all subjects that will be analyzed simultaneously, the guideline of the course will be (i) problem definition, (ii) quantification of impacts, (iii) vulnerability assessment and (iv) identification of appropriate solutions to solve it.</p> <p>(1) Introduction and selection of case studies [1 week]</p>					
<div> <div></div> <div>Continue to ILAS Seminar-E2 :Global Environmental Issues (地球環境問題)(2)</div> </div>					

ILAS Seminar-E2 :Global Environmental Issues (地球環境問題)(2)

- (2) Problem definition [2-3 weeks]
(3) Quantification of impacts [3-4 weeks]
(4) Vulnerability assessment[3-4 weeks]
(5) Identification of appropriate solutions [3-4 weeks]
(6) Final restitution [1 week]
(7) Feedback [1 week]

[Course requirements]

None

[Evaluation methods and policy]

Grading: Class attendance and participation (20%, students are expected to actively participate in discussion), oral presentation (40% during the class hours), written report (40%).

In no case will English language proficiency be a criterion for evaluating students.

Class attendance is expected: students who are absent more than three times without sound reasons (documented unavoidable absence) will not be credited.

[Textbooks]

No textbooks; reading materials will be distributed during the class or after the class (uploaded on KULASIS).

[References, etc.]

(References, etc.)

None

[Study outside of class (preparation and review)]

Students are expected to read the distributed scientific papers, to find additional ones and to prepare oral presentations. Works on team project outside of class hours is expected (about three hours between two classes).

[Other information (office hours, etc.)]

Students are encouraged to ask questions and to make comments during the class.

Students are welcome to arrange appointments by email, even outside the official office hour, for questions and discussion
