Days and periods	Mon.4		Target year	All students		Eligible students	For all majors
[Overview and purpose of the course]							
This course introduces most common mental disorders (schizophrenia, depression, etc.) and their symptoms using videos and case studies. The approach is integrative: it combines most recent psychiatric definitions (DSM-5), psychopathological and psychoanalytical understanding of human distress. By the end of this course, students will know how to diagnose mental disorders such as schizophrenia and depression.							
[Course objectives]							
To provide you with a general introduction to and understanding of mental disorders. To increase your emotional intelligence through psychopathological knowledge. To help you develop your analytical and critical thinking regarding the diagnosis of mental disorders.
