[Overview and purpose of the course]							
This is a course provided in English by the Global Health Interdisciplinary Unit. It includes a wide variety of classes to provide students with insight into the current challenges for global health. Students will be introduced to the socio-cultural, economic, political, and environmental factors that affect the health of populations globally. A series of guest speakers will be drawn from diverse fields to share their expertise. We welcome students from all faculties and graduate schools.							
[Course objectives]							
To gain a wide range of perspectives and critical knowledge about current global health issues. Students will be able to gain an understanding of why tackling global health issues is such an important endeavor with the potential to reduce poverty, build stronger economies and promote peace.							
[Course schedule and contents)]							
In principle, we will cover the following topics:							
1. Introduction: Why study global health? 2. Understanding the social determinants of health 3. Achieving the health related Sustainable Development Goals 4. Infectious Disease 5. Non communicable diseases 6. Sexual and Reproductive Health 7. Global Health and Medical Anthropology 8. The Environment and Health 9. Human Ecology and Global Health 10. Role of Innovation and Technology in Changing People' s lives 11. Global Health and Aging 12. Migration and Global Health 13. Natural Disasters and Global Health Challenges 14.
