[授業の概要・目的]

This course is intended for Japanese and international students registered in natural science majors who are interested in learning chemistry in English.

Basic Organic Chemistry II explains the fundamental concepts behind the reactivity of organic compounds. This course can be taken alone or in combination with Basic Organic Chemistry I.

[到達目標]

Students will be able to describe basic organic reaction mechanisms (nucleophilic substitutions, eliminations and electrophilic additions) and apply this knowledge to predict the major product in organic reactions, such as those involving hydrocarbons, alcohols, alkyl halides and alkenes.

[授業計画と内容]

The semester will be divided as follows:

- Week 1: General Concepts and Stereoisomerism
- Week 2: Enantiomers and Optical Activity
- Week 3: Resonance (Review)
- Week 4: Chemical Reactivity
- Week 5: Substitution Reactions (Part 1)
- Week 6: Substitution Reactions (Part 2)
- Week 7: Mid-term Exam
- Week 8: Alkene and Elimination Reactions (Part1)
- Week 9: Alkene and Elimination Reactions (Part 2)
- Week 10: Substitution vs. Elimination
- Week 11: Addition Reactions (Part 1)
- Week 12: Addition Reactions (Part 2)
- Week 13: Synthesis
- Week 14: Review of the Main Concepts
- Week 15: Final Exam
- Week 16: Feedback

[履修要件]

特になし

Basic Organic Chemistry II-E2(2)

[成績評価の方法・観点]

Evaluation will be based on class attendance and active participation (30%), mid-term exam (30%) and final examination (40%).

[教科書]

David Klein Gorganic Chemistry (Wiley) ISBN:1118452283 (not mandatory)

[参考書等]

(参考書)

Handouts will be provided at the beginning of each lecture.

[授業外学修(予習・復習)等]

Students should review the course materials after each class.

[その他(オフィスアワー等)]

Teaching Approach:

The new concepts are introduced in a skill-building format with practice problems (in class) and exercises (in class) to help students master the course material (no homework).
