【授業の概要・目的】									
We learn about the thermodynamics in the state-change of matter, also in the chemical reactions. Contents of the lecture covers the following fields of change of state, thermodynamic laws, definition of the quantities (enthalpy, entropy, free energy, chemical potential), chemical equilibrium, and reaction kinetics. Aim of this course is the understanding of these concepts.									
【到達目標】									
The aim of this class is to understand the basic principles of thermodynamics.									
【授業計画と内容】									
1. Change of the system and quantity of state 2. Thermal energy and work 3. 1st law of thermodynamics: Change of internal energy and enthalpy 4. Chemical reaction and thermal energy 5. Interpretation of internal energy in molecular level 6. Change of state of the ideal gas 7. 2nd law of thermodynamics: Entropy 8. Entropy change in the change of state 9. 3rd law of thermodynamics: Conversion from heat to work 10. Gibbs energy 11. Change of the Gibbs energy when temperature and pressure change 12. Chemical potential 13. Change of state and chemical potential change of matter 14. Chemical equilibrium and rate of chemical reaction 15. Assignment which is considered as a term examination 16. Feedback

【成績評価の方法・観点】									
Results will be evaluated by the submission of homework written in English (30%), attendance and discipline (20%), and assignment which is considered as a term examination (50%).

[授業外学修 (予習・復習) 等]

I recommend that the students should review the points to be learned.
