【授業の概要・目的】											
<p>Physical chemistry is the discipline that studies the basic concepts and principles of the formation of molecules and substances, the nature and characteristics of chemical bonds and molecular structures, chemical equilibrium, and reaction rates.</p> <p>This course is designed as the introductory physical chemistry, specifically aims to learn and understand the principles of quantum mechanics and its applications to the formation of atoms and molecules, the basic constituents of substances. The knowledge learned from this course will be the foundation for learning all areas of chemistry, including advanced-level physical chemistry, organic chemistry, and inorganic chemistry.</p>											
【到達目標】											
<ul style="list-style-type: none"> • To understand the principles of quantum mechanics • To understand the descriptions of atoms and molecules based on quantum mechanics • To be able to use quantum mechanics to solve for the electronic wavefunctions in atoms and molecules • To understand the description of chemical bonds based on the concept of molecular orbitals 											
【授業計画と内容】											
<p>The following topics will be covered. The order of topics and subtopics and the number of weeks allocated to each topic is subject to change, depending on the students' understanding.</p> <ol style="list-style-type: none"> 1. Introduction to quantum mechanics [1 week] The breakdown of classical mechanics and the birth of quantum mechanics 2. Quantum mechanical principles [1~2 weeks] Energy quantization, wave-particle duality, the Born interpretation of the wavefunction 3. Examples of Schrodinger equation [1~2 weeks] A particle in a box, tunneling, vibrational and rotational motions 4. Hydrogen atom [1~2 weeks] Atomic orbitals and their energies 5. Multi-electron atoms [1~2 weeks] Electron spin, the Pauli exclusive principle, the periodic table 6. Diatomic and polyatomic molecules [1~2 weeks] Molecular orbitals, linear-combination-of-atomic-orbital (LCAO) approximation 7. Chemical bonds [1~2 weeks] Covalent and ionic bonds 8. Interactions between molecules [1~2 weeks] 9. Final paper (report) 10. Feedback [1 week] <p>Total : 14 classes, 1 Feedback session</p>

【履修要件】

特になし

【成績評価の方法・観点】

The evaluation will be based on a final paper (report) (86 points) and class attendance and active participation (14 points).
