[授業の概要・目的]																
Understanding the past earth activities and its geological records provides essential information to predict development and environmental change of the earth. Past earth activities can be investigated through geological field studies. This lecture is designed to understand the role of field work studies based on traditional to modern earth scientific methods.																
[到達目標]																
The objective of this course is to develop an understanding of fundamental geological concepts and processes of plate tectonics and its influences on the dynamic Earth. The lectures comprise a general introduction to plate tectonics theory and selected detailed field case studies from Japan and the world.																
[授業計画と内容]																
 developing earth is based on the theory of plate tectonics. This lecture demonstrates how geological information obtained by field studies enables earth scientists to establish the plate tectonics theory. 1. General introduction of the significance of the field survey correlated with the plate tectonics theory. (2 times) 2. Understanding time scale which produce various geological phenomenon. (2 times) 3. Introduction of development the geology around Kyoto, accretional complex. (2 times) 4. Plate tectonics and climate change case studies (8 times) Antarctica North polar-region Himalaya Volcanic chains in the circum Pacific region Course will be offered in the second semester with 14 classes, one examination and one feedback class. 																
特になし 【式结証価の支法・知ら】																
Students are able to (1) demonstrate knowledge of geological techniques relevant to the plate tectonics theory; and(2) identify and interpret common minerals, rocks, fossils and tectonic structures and interpret their formation; and (3) read and interpret basic geological maps. The evaluation method comprises (1) an in class assignment (50%) and (2) written examination during the official examination term (50%).																

Field Earth Science-E2(2)

[教科書]

授業中に指示する

Instruction is given during class.

[参考書等]

(参考書)

授業中に紹介する

Instruction is given during class.

[授業外学修(予習・復習)等]

This course has been designed to allow students to integrate the concepts covered in lectures with own readings. A joint group project is developed by students based on data from a range of sources. Students will be supported throughout the project by discussions with your lecturer and associated students.

[その他(オフィスアワー等)]

Office hours and method of communication given during class.
