【授業の概要・目的】												
Based on the knowledge of Calculus with Exercises A/B and Linear Algebra with Exercises A/B or Calculus A/ B and Liner Algebra A/B, this course explains ordinary differential equations. Starting from the basic solutions techniques (such as separation of variables and integrating factors) for differential equations, the course introduces the second order linear differential equations and their solution. Differential equations are studied in context of modelling of various physical situations (for example, vibrations, mixing problem, population dynamics, etc.).												
【到達目標】												
To learn the different types of differential equations and their solution methods.												
【授業計画と内容】												
1. Elementary methods of solution (6 weeks) - Separation of variables, linear first order differential equations, total differential equations (exact differential equations) and integrating factors 2. Existence and uniqueness of the solution of initial value problems (4 weeks) - Space of continuous functions and its properties (normed spaces, completeness), iterated approximation, Cauchy-Lipschitz's theorem and the connection of solution 3. Linear differential equations (4 weeks) - Space of solutions of homogeneous equations, variation of parameters, exponential function for matrices and Wronskian determinant. 4. Feedback (1 week)												
【履修要件】												
To understand Calculus with Exercises A/B and Linear Algebra with Exercises A/B or Calculus A/B and Linear Algebra A/B.												
【成績評価の方法・観点】												
Weekly submission of class examples, class participation and homework (20%), Snap quizzes (15%), Final examination(65%).

[授業外学修（予習・復習）等]

Students are encouraged to do assigned homework related to the classes.

[その他（オフィスアワー等）]

The content of this course is independent of Advanced Calculus I in the 1st semester.
