R is a programming language whose purpose is to be able to process and organize data sets, and to represent these data graphically. Since the two last decades, R is widely used by scientists worldwide for data management and statistical analyses. This course aims to get students to start using R for analysing data and interpreting the output of basic statistical tests. Classes are taught in the form of practical exercises on computers.

[到達目標]

Upon successful completion of this course students will be able (i) to design and statistically analyse a simple experimental plan using R, (ii) to find and perform by themselves an accurate test for solving their scientific question, even if it has not been specifically addressed during the course and (iii) to produce smart graphics for the presentation of analysed data.

[授業計画と内容]

The course will simultaneously address how to use the R language to manage data, to implement relevant statistical tests and to generate graphical output

Course schedule:

- 1. Introduction
- 2. object in R: vectors, matrix, functions
- 3. data frame -importing data
- 4. Descriptive statistics
- 5. Programming with R and random numbers
- 6. Study of the distribution of quantitative variables
- 7. Importing, managing and analysing data (1)
- 8. Importing, managing and analysing data (2)
- 9. Linear model: linear regression
- 10. Importing, managing and analysing data (3)
- 11. Linear model: analysis of variance
- 12. Improving the quality of graphics for a presentation or report
- 13. Analysing a dataset: building the script and writing a report (1)
- 14. Analysing a dataset: building the script and writing a report (2)
- 15. Feedback

Programming Practice (R)-E2 :For managing and analysing data(2)

[履修要件]

All students are welcome

Students will have to bring their own laptops to use in class that they will also use for homework. Students have to download and install R software and R-studio software before starting the course.

[成績評価の方法・観点]

Grading: Homework (three to five, 50%), script and report based on the final exercise (50%).

In no case will English language proficiency be a criterion for evaluating students.

Class attendance is expected: students who are absent more than three times without sound reasons (documented unavoidable absence) will not be credited.

[教科書]

Lecture notes will be provided before the class and R scripts will be provided after each class (uploaded on PandA).

[参考書等]

(参考書)

An Introduction to R (https://cran.r-project.org/manuals.html)

[授業外学修(予習・復習)等]

Work not finished in class time should be finished at home. Self-training is recommended: exercises will be provided.

[その他(オフィスアワー等)]

Students are encouraged to ask questions and to make comments during the class.

Students are welcome to arrange appointments by email, even outside the official office hour, for questions and discussion

[主要授業科目(学部・学科名)]
