[授業の概要・目的]

This seminar introduces various fascinating aspects of chaos. While "chaos" often has the connotation of something complicated and uncontrollable, we will see that chaotic behavior can emerge from seemingly simple situations. We will discover that chaos can be, in its own way, very ordered. Perhaps even more surprisingly, chaos can actually be a source of stability. Along the way, we will familiarize ourselves with some of the necessary mathematical tools to describe chaotic behavior. Finally, we will discuss where chaos occurs in physics and everyday phenomena. Throughout the seminar, we will perform several simple experiments on a computer and learn to recognize chaotic behavior.

[到達目標]

- Understanding the connection between non-linearity and chaos.
- Becoming familiar with the basic mathematical theory of chaos.
- Recognizing chaotic phenomena in daily life and physics.
- Being able to write simple computer programs to visualize chaotic behavior.

[授業計画と内容]

- Week 1-2: Dynamical systems and phase-space description.
- Week 3-6: Using the Julia programming language to visualize dynamical systems.
- Week 7-9: Bifurcations: the route to chaos.
- Week 10: The Lyapunov exponent: chaotic or not?
- Week 11-12: Self-similarity and Feigenbaum constants: order in chaos.
- Week 13-14: Chaos in physics.
- Week 16: Feedback

[履修要件]

Basic programming skills and knowledge about basic physics (mechanics) are helpful but not required. Students should be familiar with high-school level mathematics (algebra and calculus).

[成績評価の方法・観点]

The students will be graded based on their participation in class (30%) as well as worksheets and programming assignments (70%). Students will need at least 60% in total to pass.

[教科書]

No textbook, handouts will be provided.

AS Seminar-E2 :Chaos theory (カオス理論) (2)
tudents will occasionally have to complete assignments or simple programming exercises.
[その他(オフィスアワー等)]
Office hour: Wed. 15:00-16:00
