**[授業の概要・目的]**

This class will focus on non-human primates (prosimians, monkeys, apes) and why they are of particular interest to biologists, anthropologists, and psychologists. Students will learn about the distribution of primates, their socio-ecological strategies, social systems, cognitive abilities and welfare. Observational and experimental investigations of these and related phenomena will be reviewed and analyzed. The aim is to investigate the ecological and psychological status of primates in today's world. The course also aims to provide students with the opportunity to communicate about primates in English.

**[到達目標]**

The class aims to help students acquire knowledge about the evolution of primates - their structure, social and nonsocial behaviour, and how they adapt to changing environmental circumstances, and to use written and spoken English to express their knowledge.
