<b>【授業の概要・目的】</b>									
<p>This course provides graduate students who are about to start their research with guidance for how they should be prepared to act as a responsible researcher. Students will learn how to conduct research in accordance with the University's norms. In particular, the lectures will show how misconduct in scientific research can hinder the development of sound science. Along the way students will learn how to take steps to protect themselves in research environments, and how we can all help to build a positive, productive, and ethical research culture.</p> <p>Through guided group discussion students will learn to develop a critical perspective on the practices of academic research, as well as sharing insights on the specific challenges that researchers may face in their professional lives. Alongside specific guidance on the rules and regulations, the course will signpost students to resources for ongoing support, and will explain the processes through which the integrity of research environments is safeguarded by university and governmental authorities.</p>									
<b>【到達目標】</b>									
<p>To learn what it means to act responsibly as a researcher and to better understand the pressures which can cause research misconduct to occur. Through a combination of lectures and guided group discussions, students will be invited to reflect on the virtues which make for a good researcher, the values which research encodes, and the potential ramifications of research misconduct. Finally, students will take a JSPS e-learning course on Research Ethics to confirm their understanding.</p>
